

# The widest range of touchless solutions for Horeca and Office environments

Cosmetal launches new models of dispensing system for supplying water without touching the equipment. **Safety and quality for a full, interesting consumer experience.**

IMMEDIATE  
AVAILABILITY

As a result of the Covid-19 emergency, the Italian National Institute of Health has taken a clear position regarding the safety and quality of mains water: water is not a danger for infection and the presence of the virus in water intended for human consumption is not a plausible theory.

In addition, the supply of drinking water from usage points at home, in the workplace or in healthcare environments is an essential primary prevention measure.

**Cosmetal, an international leader in the design and production of innovative solutions for drinking water, has developed a complete range of touchless solutions dedicated to the main product families, now immediately available, also as a Retrofit kit.**

If the supply is activated from a traditional keypad, hands come into contact with the machine's controls, and may leave germs, bacteria and viruses found on the skin present on the surface.

**Automatic activation of the supply can therefore be a good alternative, to make use of the equipment more hygienic, especially equipment shared in contexts with a high user count.**

As control occurs through a sensor, no direct contact is necessary. In this way, the possibility of transmitting germs, bacteria and viruses present on the skin is reduced to a minimum.

With over 30 touchless models,  
Cosmetal can satisfy any supply need

**HORECA**

G400 elt tap

Drink Tower

Niagara Table Top

## Solutions that combine design and simplicity of use with efficacy and versatility

### Reliable, user-friendly technology

Touchless technology based on **infrared reflective sensors**. With a range of action of 1-5 cm, the sensors allow precise reading of the movement, avoiding random activations and thus limiting any waste of water.

### Design and functionality

Cosmetal's touchless solutions have been designed to be **perfectly integrated into the design and characteristics of the various product families**, thus allowing the supply of 2 or 3 drinks.

### A dedicated touchless range

Supplying water safely is a requirement in many, often different locations: **the Cosmetal touchless proposal** includes all the most-used potentials, to provide tangible answers for small and large consumptions.

### Retrofit possibility

Cosmetal has created **Retrofit kits in order to be able to intervene on a few machine parts that are already installed**, transforming them from traditional to touchless.
